

HOW TO MAKE A PAPER PLANE:

Step 1: Place paper:

Place the paper on a flat surface in front of you, as if you were about to write a letter.

Step 2: Crease paper:

Fold the paper in half lengthwise. Make a crease, then unfold the paper and smooth it flat again.

Use your finger to make your creases really sharp.

Step 3: Fold corners:

Fold the top two corners down and toward the crease to form two triangles, creating a point at the top of the paper. Press the folds flat.

Step 4: Fold edges:

Now fold the two slanted edges at the top of the paper in so that they also run along the middle crease.

Step 5: Fold along crease:

Fold the entire right side of the paper over the left side (along the middle crease), so that all of your new folds are on the inside.

Step 6: Form wing:

Fold down the top folded edge on one side so that it runs along your original middle crease. This will create one of your wings.

Step 7: Form other wing:

Flip the paper over and repeat, folding the slanted edge over to meet the middle crease, forming your other wing.

Step 8: Unfold wings upward:

Unfold the wings slightly upward, and you're ready to for takeoff.
